

PLEX SYSTEMS

ENTERPRISE RESOURCE PLANNING (ERP)

Plex offers several options for Application Programming Interfaces (APIs) to ensure that ERP and business data is accessible to other programs. Interfaces include a variety of endpoints including customer orders, customer shipping, and just-in-sequence parts delivery that ensure the customer can identify the best API to suit their business needs. Utilization of these APIs saves time, money, and effort since the development and integration work is already done for you.

Integration Flexibility

Improve the overall functionality of your ERP business applications by extending their reach throughout the organization into quoting, fulfillment, and shipping APIs that are developed specifically by designated partners. The developer portal is also available for creating unique APIs driven by your company's business demands and geared toward your future goals.

Increased ROI

Maximize flexibility by using the best-fit API solutions for increased ROI of your existing capital IT investments. Remove the boundaries from your capital expenditures and explore new functionality for your business in the ever-changing customizable landscape of technology.

Leverage

Leverage specific functionality of unique applications from setting up shop on an e-commerce platform to finding the best rate for an already planned shipment. Reduce fulfillment costs by expanding the value of Plex to other systems or community-built applications through APIs to the core Plex applications.

PLEX SYSTEMS

ENTERPRISE RESOURCE PLANNING (ERP)

Plex offers a variety of APIs sourced for business areas including purchasing, logistics, and finance as well as many other business functions. Plex users can also access the developer portal to craft the API that best suits their business needs.

Customer Purchase Order APIs

Manage customer order information with ease as data is integrated from Plex ERP to a select third-party data manager through a secure API. This new suite adds support for integrating to other solutions such as an e-commerce order entry application, or communication back and forth to a cost price quote application.

- Integration with order management software (Salesforce, etc.)
- E-commerce sites
- Quote management software

Customer Shipping APIs

Shipping is much bigger than just an ERP system. This suite of APIs facilitates integration between third-party logistics systems and fulfillment solutions to reduce costs, improve delivery times, and expand the value of Plex to other systems.

- Rate quote & ship applications
- Transportation management systems (TMS)
- Pick and pack solutions

Just-in-Sequence Parts Delivery APIs

A suite of APIs that enable communication from Plex to third-party sequencing solutions. This module allows you to eliminate extra overhead costs, win new business where sequencing is a requirement, and integrate quality into the fulfillment process to ensure the right parts are being delivered to the right place in the right order.

- External sequencing solutions
